**The Mediterranean
region is a biodiversity
hotspot.**

**Its remarkable floristic
heritage is endangered
by current socio-
economic mutations
and global change.**

**Powerful impacts
that require solutions
up to the challenges.**

Created in 2018,
RESEDA-Flore is the
very first network
working all over the
French Mediterranean
territory for the
conservation
of flora.

It brings together numerous
scientific organisations of
conservation and biodiversity
management, linked by a
cooperation charter. They
all act in concert, contributing
to improve the conservation
of plants and their
environments.

This cooperation is based
on a closer link between
fundamental research
organisations and those acting
on the concrete management
of natural environments.

OBJECTIVES

To involve all the stakeholders
of the conservation of the
Mediterranean flora

To develop a biogeographic
conservation strategy

To produce methods and
tools to help in the reflection
and sustainable management
of natural environments and
species

To structure actions for
monitoring and conservation
of high-concerns species
and habitats

To support conservation actors
and to promote their results

To share the concerns
with the general public
